## Part I

# Introduction

## 1 The package PixelArtTikz

### 1.1 Introduction

The idea is to *propose*, within a *TikZ* environment, a macro to generate PixelArt.

The data is *read* from a *csv* file, already existing in the folder of the *tex* file, or created on-the-fly by *filecontents*.

Some advices about the *csv* file :

- the *csv* file must use "," as separator;
- empty cells are coded by "-".

```
\begin{filecontents*}{filename.csv}
  A,B,C,D
  A,B,D,C
  B,A,C,D
  B,A,D,C
\end{filecontents*}
```

Code  $\LaTeX$

While compiling, the file *filename.csv* will be created, and the option `<[overwrite]>` will propagate the modifications!

### 1.2 Loading of the package, and option

The package *csvsimple* is necessary in order to read the *csv* file.

The package is available in two versions, one written in  $\LaTeX 2_{\epsilon}$  and the other in  $\LaTeX 3$ . By default, *PixelArtTikz* loads the  $\LaTeX 3$  version, but an *option* is available to work with the  $\LaTeX 2_{\epsilon}$  version.

The option `<[csvii]>` forces the usage of the  $\LaTeX 2_{\epsilon}$  version.

```
\usepackage{PixelArtTikz}           %package latex3
%which loads
%\RequirePackage{expl3}
%\RequirePackage[13]{csvsimple}

\usepackage[csvii]{PixelArtTikz}    %package latex2
%which loads
%\RequirePackage[legacy]{csvsimple}
```

Code  $\LaTeX$

### 1.3 Used packages

It's fully compatible with usual  $\LaTeX$  engines, such as *latex*, *pdflatex*, *lualatex* or *xelatex*.

It loads the following packages and libraries:

- *tikz*, *xintexpr* et *xinttools*;
- *xstring*, *xparse*, *simplekv* and *listofitems*.

## 1.4 Macros and environment

There are two ways to create PixelArt:

- with an independent macro;
- with a TikZ environment in order to add code afterwards.

Code 

```
%Independent macro
\PixlArtTikz[keys]<options tikz>{file.csv}

%Semi-independent macro, in a tiks environment
\PixlArtTikz*[keys]{file.csv}

%environment
\begin{EnvPixlArtTikz}[keys]<options tikz>{file.csv}
  %tikz code
\end{EnvPixlArtTikz}
```

## 2 Colors

Concerning colors: the user can use all colors provided by loaded packages!

Without extra packages, the available colors are:

magenta	cyan	blue	green	red	darkgray	olive	lime	brown	lightgray
white	gray	black	yellow	violet	teal	purple	pink	orange	

# Part II

## Macros and environment

### 3 Main macro

#### 3.1 Example

The macro `\PixelArtTikz` needs :

- the file `csv`;
- the list (by a string) of codes used in the file `csv` (e.g. `234679` or `ABCDJK...`);
- the list of symbols (if needed) to print in the cells, e.g. `25,44,12` or `AA,AB,AC`;
- the list of colors (for the correction), same order as the codes.

We can begin by creating the file `csv`, directly within the `tex` code, or with a external file.

```
%creation of the csv
\begin{filecontents*}[overwrite]{base.csv}
  A,B,C,D
  A,B,D,C
  B,A,D,C
  C,A,B,D
\end{filecontents*}
```

Code  $\LaTeX$

```
%instructions and pixelarts
\begin{center}
  \begin{tblr}{colspec={*4}{Q[1.25cm,c,m]},hlines,vlines,rows={1.15em}}
    \SetCell[c=4]{c} Instructions & & & \\
    A & B & C & D \\
    45 & 22 & 1 & 7 \\
    Black & Green & Yellow & Red \\
  \end{tblr}
\end{center}

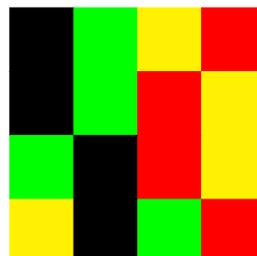

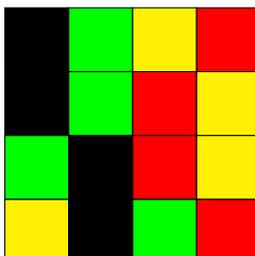

\PixelArtTikz[Codes=ABCD,Style=\large\sffamily,Unit=0.85]{base.csv}
~~
\PixelArtTikz[Codes=ABCD,Symbols={45,22,1,7},Symb,Style=\large\sffamily,Unit=0.85]{base.csv}
~~
\PixelArtTikz[Codes=ABCD,Colors={black,green,yellow,red},Correction,Unit=0.85]{base.csv}
~~
\PixelArtTikz[Codes=ABCD,Colors={black,green,yellow,red},Correction,Border=false,Unit=0.85]{base.csv}
```

Code  $\LaTeX$

Instructions			
A	B	C	D
45	22	1	7
Black	Green	Yellow	Red

A	B	C	D
A	B	D	C
B	A	D	C
C	A	B	D

45	22	1	7
45	22	7	1
22	45	7	1
1	45	22	7

## 3.2 Options and keys

```
\PixlArtTikz[keys]<options tikz>{file.csv}
```

Code  $\LaTeX$

The first argument, *optional* and between [...] proposes the keys:

- the key **<Codes>** with the *string* of *simple* codes of the csv file;
- the key **<Colors>** with the *list* of colors;
- the key **<Symbols>** with the *optional list* of alt. symbols for the cells;
- the boolean **<Correction>** to color the PixelArt; default false
- the boolean **<Symb>** to print the symbols; default false
- the boolean **<Border>** to print borders of the cells; default true
- the key **<Style>** to specify the style of the text. default \scriptsize

The second argument, *optional* and between <...>, are TikZ options to pass on to the environment which creates the PixelArt.

The third argument, *mandatory*, is the filename of the csv.

```
%creation of the csv
\begin{filecontents*}[overwrite]{test1.csv}
-,,-,,-,4,4,4,4,,-,,-,,-,
-,,-,,-,4,4,1,1,1,1,4,4,,-,,-,
-,,-,4,1,1,1,1,1,1,1,1,4,,-,,-,
-,,-,4,1,1,1,1,1,1,1,1,1,4,,-,
-,,-,4,1,1,1,1,1,1,1,1,1,1,4,,-,
-,4,1,9,9,1,1,1,1,1,1,9,9,1,4,-
-,4,9,9,9,9,4,4,4,4,9,9,9,9,4,-
-,4,9,4,9,9,4,4,4,4,9,4,9,9,4,-
-,4,1,9,9,9,4,4,4,4,9,9,9,1,4,-
-,,-,4,1,1,9,4,4,4,4,9,1,1,4,-,
-,,-,4,1,1,1,4,4,4,4,1,1,1,4,-,
-,,-,4,1,1,1,4,4,1,1,1,4,-,,-,
-,,-,4,3,1,1,1,1,1,1,1,1,3,4,-,
-,4,6,3,1,1,1,1,1,1,1,1,3,6,4,-
-,4,6,6,1,1,1,1,1,1,1,1,6,6,4,-
-,4,6,6,1,1,1,1,1,1,1,1,6,6,4,-
-,4,6,4,1,1,1,4,4,1,1,1,4,6,4,-
2,2,4,2,4,4,4,2,2,4,4,4,2,4,2,2
2,2,2,2,2,2,2,2,2,2,2,2,2,2,2,2
2,2,2,2,2,2,2,2,2,2,2,2,2,2,2,2
-,,-,,-,4,1,1,1,1,4,,-,,-,,-,
-,,-,,-,4,1,1,4,,-,,-,,-,,-,
-,,-,,-,4,4,,-,,-,,-,,-,,-,
\end{filecontents*}
```

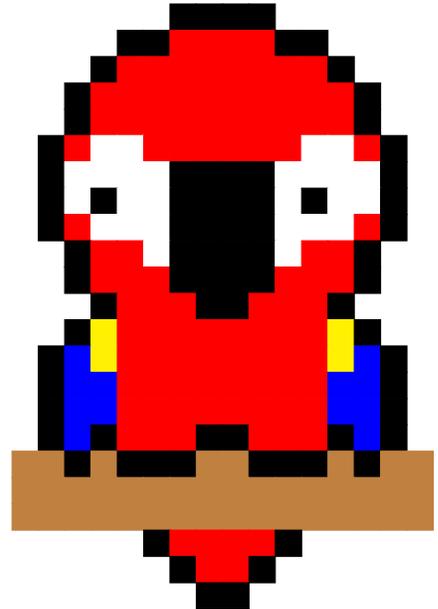

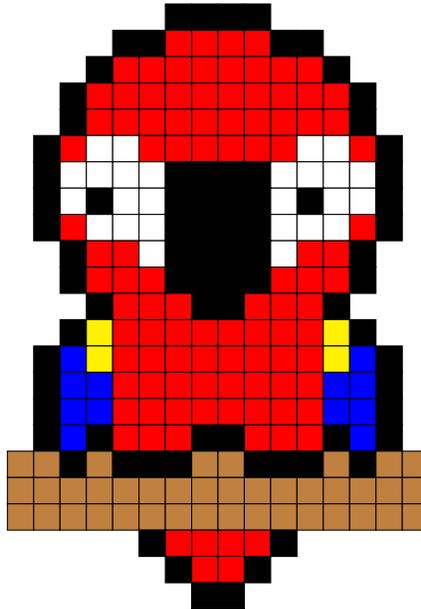

Code  $\LaTeX$

```

%simple codes
%empty case with -
\PixelArtTikz[Codes=123469,Style=\ttfamily,Unit=0.35]{test1.csv}
~~
\PixelArtTikz[Codes=123469,Colors={red,brown,yellow,black,blue,white},Correction,Unit=0.35]{test1.csv}
~~
\PixelArtTikz[Codes=123469,Colors={red,brown,yellow,black,blue,white},Correction,Unit=0.35,Border=false]{test1.csv}

```

			4	4	4	4																	
		4	4	1	1	1	1	4	4														
	4	1	1	1	1	1	1	1	4														
4	1	1	1	1	1	1	1	1	4														
4	1	1	1	1	1	1	1	1	4														
4	1	9	9	1	1	1	1	1	9	9	1	4											
4	9	9	9	9	4	4	4	4	9	9	9	9	4										
4	9	4	9	9	4	4	4	4	9	4	9	9	4										
4	1	9	9	9	4	4	4	4	9	9	9	1	4										
	4	1	1	9	4	4	4	4	9	1	1	4											
		4	1	1	1	4	4	4	4	1	1	1	4										
			4	1	1	1	4	4	1	1	1	4											
				4	3	1	1	1	1	1	1	1	3	4									
					4	6	3	1	1	1	1	1	1	1	3	6	4						
						4	6	6	1	1	1	1	1	1	1	6	6	4					
							4	6	6	1	1	1	1	1	1	1	6	6	4				
								4	6	4	1	1	1	4	4	1	1	1	4	6	4		
									2	2	4	2	4	4	2	2	4	4	4	2	4	2	2
										2	2	2	2	2	2	2	2	2	2	2	2	2	2
											2	2	2	2	2	2	2	2	2	2	2	2	2
												4	1	1	1	1	4						
													4	1	1	4							
														4	4								

### 3.3 Symbols within list(s)

List of symbols can be given within list(s), picked randomly.

Code  $\LaTeX$

```

\begin{filecontents*}[overwrite]{testlist.csv}
A,B,C,A
A,B,B,C
B,A,C,B
C,A,B,C
\end{filecontents*}

\textbf{Notice : }

Multiples of 5 : red\\
Multiples of 3 : green\\
Multiples of 2 : blue

\PixelArtTikz[Codes=ABC,Symbols={5§25§35,3§9§21§27,2§4§8§14§16},Symb,Style=\large\sffamily,Unit=0.85]{testlist.csv}
\hspace{5mm}
\PixelArtTikz[Codes=ABC,Symbols={5§25§35,3§9§21§27,2§4§8§14§16},Symb,Style=\large\sffamily,Unit=0.85]{testlist.csv}
\hspace{5mm}
\PixelArtTikz[Codes=ABC,Colors={red,green,blue},Correction,Style=\large\sffamily,Unit=0.85]{testlist.csv}

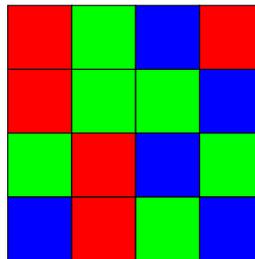

```

**Notice :**

Multiples of 5 : red  
 Multiples of 3 : green  
 Multiples of 2 : blue

35	9	8	35
25	3	27	16
27	25	4	27
8	5	3	2

35	9	14	35
35	27	9	4
9	35	14	3
14	5	3	4

### 3.4 Starred macro

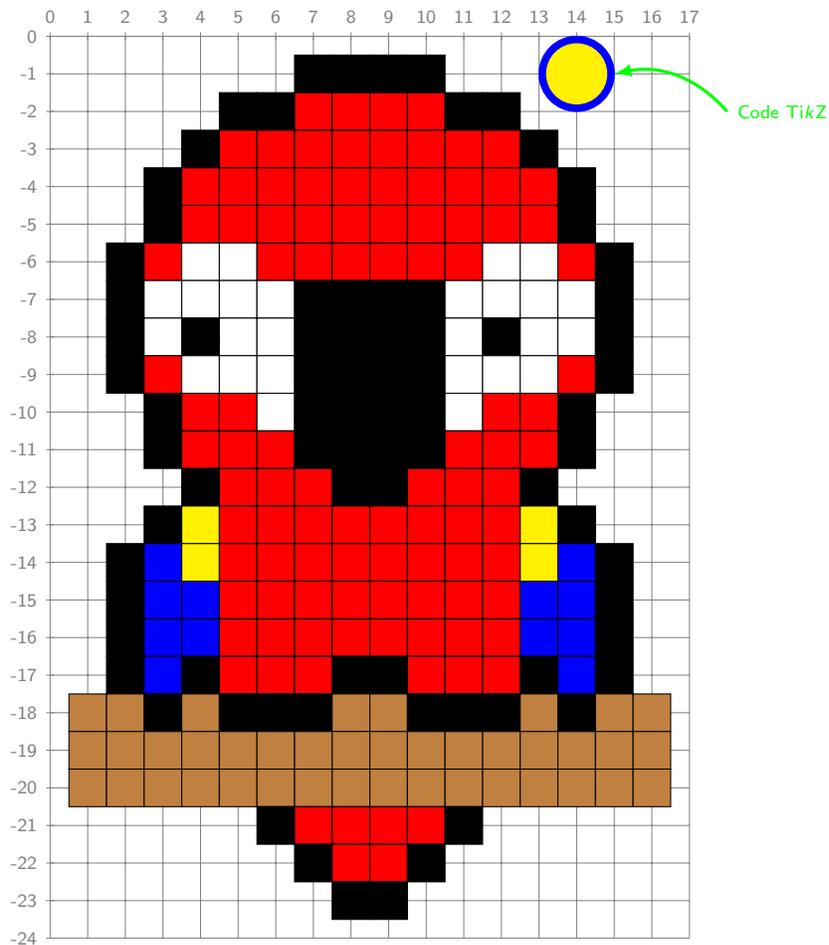

The starred macro `\PixelArtTikz*` is to be used within an already created environment. It can be useful for adding code after the `PixelArt`.

In this case:

- the *optional* argument between `<...>` is discarded;
- the key `<Unit>` is discarded too (units can be configured in the environment!)

Code `MTEX`

```
\begin{center}
  \begin{tikzpicture}[scale=0.5]
    %grid to show positioning
    \draw[very thin,gray,xstep=1,ystep=1] (0,0) grid (17,-24) ;
    \foreach \x in {0,1,...,17} \draw[very thin,gray] (\x,-3pt)--(\x,3pt)%
    node[above,font=\scriptsize\sffamily] {\x} ;
    \foreach \y in {0,-1,...,-24} \draw[very thin,gray] (3pt,\y)--(-3pt,\y)%
    node[left,font=\scriptsize\sffamily] {\y} ;
    %le PixelArt
    \PixelArtTikz*[Codes=123469,Colors={red,brown,yellow,black,blue,white},Correction]{test1.csv}
    %added code
    \filldraw[blue] (14,-1) circle[radius=1] ;
    \filldraw[yellow] (14,-1) circle[radius=0.8] ;
    \draw[green,very thick,<-,>=latex] (15,-1) to[bend left=30] (18,-2)%
    node[right,font=\scriptsize\sffamily] {Code Ti\textit{k}Z} ;
  \end{tikzpicture}
\end{center}
```

## 4 PixelArt environment

### 4.1 Usage

The package PixelArtTikz provides an environment to create a PixelArt and add code afterwards.

- The environment is created within TikZ and additional code is passed on to the TikZ environment!
- The additional code will be printed on top of the PixelArt!

```
\begin{EnvPixelArtTikz}[keys]<options tikz>{filename.csv}
  %tikz code(s)
\end{EnvPixelArtTikz}
```

Code  $\LaTeX$

The first argument, *optional* and between [...], proposes the keys:

- the key **<Codes>** with the *string of simple* codes of the csv file;
- the key **<Colors>** with the *list* of colors;
- the key **<Symbols>** with the *optional list* of alt. symbols for the cells;
- the boolean **<Correction>** to color the PixelArt; default false
- the boolean **<Symb>** to print the symbols; default false
- the boolean **<Border>** to print borders of the cells; default true
- the key **<Style>** to specify the style of the text. default  $\scriptsize$

The second argument, *optional* and between <...>, is for TikZ options to be passed on to the environment which creates the PixelArt.

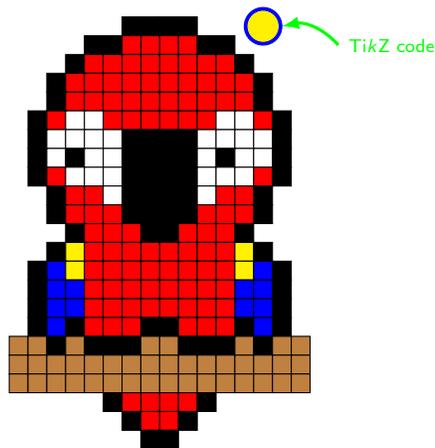

The third argument, *mandatory*, is the filename of the csv.

### 4.2 Example

The symbols are at the nodes ( $c; -l$ ) where  $l$  and  $c$  are the row and column of the data in the csv file.

```
\begin{center}
  \begin{EnvPixelArtTikz}%
    [Codes=123469,Colors={red,brown,yellow,black,blue,white},Correction,Unit=0.25]
    {test1.csv}
    \filldraw[blue] (14,-1) circle[radius=1] ;
    \filldraw[yellow] (14,-1) circle[radius=0.8] ;
    \draw[green,very thick,<->=latex] (15,-1) to[bend left=30] (18,-2)%
      node[right,font=\scriptsize\sffamily] {Ti\textit{k} code} ;
  \end{EnvPixelArtTikz}
\end{center}
```

Code  $\LaTeX$

## 5 Macro for *mini-PixelArt*

### 5.1 Idea

The idea is to propose a macro to insert, without csv file, a small PixelArt with small colors list.

```
\MiniPixelArt[keys]{list of colors}
```

Code  $\LaTeX$

The first argument, *optional* and between [...] proposes the keys :

- the key **(Unit)** for dimension of the cells ; default 0.25em,
- the boolean **(Border)** to print a small border for the cells. default false

The second argument, *mandatory* and between {...}, is the colors of the cells :

- each color is *coded* by a letter :

– R : red	– C : blue	– B : black	– . : white	– O : orange
– G : green	– Y : yellow	– L : gray	– M : maroon	– P : purple

- each linebreak is done by , ;
- the thickness of the borders are 10% of the unit.

The last argument, *optional* and between <...>, proposes options for the tikz environment.

### 5.2 Examples

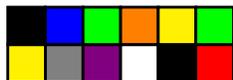

```
\MiniPixelArt{%  
  .RR.RR.,  
  .RRRRRRR.,  
  RRRRRRRRRR,  
  RRRRRRRRRR,  
  RRRRRRRRRR,  
  .RRRRRRRR.,  
  ..RRRRRR.,  
  ...RRRR.,  
  ....RR.,  
}
```

Code  $\LaTeX$

Inline, we can give `\MiniPixelArt[Unit=5mm,Border]{BCGOYG,YLP.BR}<baseline=(current bounding box.center)>` this miniPA.

Inline, we can give

this miniPA.

Code  $\LaTeX$

## 6 Macro for cutting PixelArt

### 6.1 Idea

The idea is to offer commands to create *collaborative* PixelArts, to form a *large* image from several small ones (of the same size).

☛ For practical reasons (related to the use of `filecontents`) the file `csv` must end with an empty line (it is created automatically via `filecontents`, and the code uses this specificity).

The available **<keys>** are exactly the same as those in classic displays.

### 6.2 Global usage

The argument `cutting` can be given in the form :

- **<number of block length>x<number of block col>** to specify the size of the blocks;
- **<number of V blocks>+<number of H blocks>** to specify the number of blocks.

```
\CutPixlArtTikz(*)[keys]<tikz options>{file.csv}{cutting}
%(*) := change layout formatting (A1 or 1.1)
%1 := keys
%2 := tikz options
%3 := csv file
%4 := block size (LxC) or block number (L+C)

\HelpGridPixelArtTikz(*)[scale]{file.csv}{cutting}
%(*) := change layout formatting (A1 or 1.1)
%1 := scale of notice
%2 := csv file
%4 := block size (LxC) or block number (L+C)
```

Code  $\LaTeX$

### 6.3 Example

```
\def\listcoulkoala%
{VertForet,Noir,GrisClair,GrisFonce,Beige,Blanc,BleuClair,VertClair,Marron}
```

Code  $\LaTeX$

```
%block with 8x8 size
\HelpGridPixelArtTikz{PAkoala.csv}{8x8}
~~
\PixlArtTikz[Correction,Unit=0.125,Codes=ABCDEFGHI,Colors={\listcoulkoala},Grid=8x8]{PAkoala.csv}
```

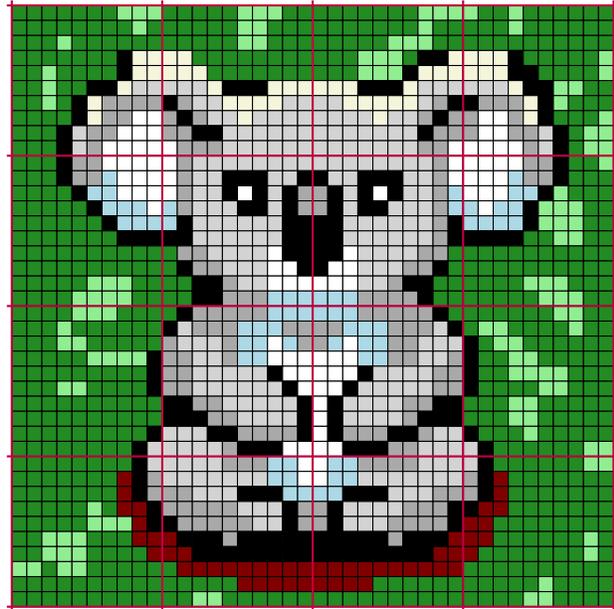

Code  $\LaTeX$

A1	A2	A3	A4	A5
B1	B2	B3	B4	B5
C1	C2	C3	C4	C5
D1	D2	D3	D4	D5
E1	E2	E3	E4	E5

```
%16 blocks (4L 4C)
\HelpGridPixelArtTikz*[2]{PAkoala.csv}{4+4}
~~
\PixelArtTikz[Correction,Unit=0.2,Codes=ABCDEFGH,I,Colors={\listcoulkoala},Grid=4+4]{PAkoala.csv}
```

1.1	1.2	1.3	1.4
2.1	2.2	2.3	2.4
3.1	3.2	3.3	3.4
4.1	4.2	4.3	4.4

```
%block with 8x8 size
\CutPixlArtTikz [Unit=0.3, Codes=ABCDEFGH] {PAkoala.csv} {8x8}
```

## 7 Anamorphic cylinder PixelArt

### 7.1 Idea

The idea is to provide something to create PixelArt with the aim of using a cylindrical anamorphosis. On <https://www.youtube.com/watch?v=PT8KUozBg3I>, there is a video *demonstration*, proposed by Jean-Yves Labouche. The overall operation is similar to that of the *main* command, however there are some adjustments:

- the possibility of giving the file csv in *normal* or *inverted* mode;
- the dimensions (width & middle) must be specified to produce the PixelArt;
- the command is standalone (for the moment) so no addition(s) later.

```
\PixelArtTikzCylindric[keys]{file.csv}
```

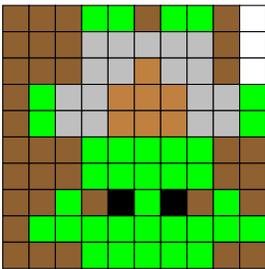

Code  $\LaTeX$

The files illustrating this paragraph are given below.

```
%version with inverted data
\begin{filecontents*}[overwrite]{PAyoda.csv}
E,E,E,A,A,E,A,A,E,D
E,E,E,F,F,F,F,F,E,D
E,E,E,F,F,C,F,F,E,D
E,A,F,F,C,C,C,F,F,A
E,A,F,F,C,C,C,F,F,A
E,E,E,A,A,A,A,A,E,E
E,E,E,A,A,A,A,A,E,E
E,E,A,E,B,A,B,E,A,E
E,A,A,A,A,A,A,A,A
E,E,E,A,A,A,A,A,E,E
\end{filecontents*}

\PixelArtTikz[%
  Codes=ABCDEF,
  Colors={green,black,brown,white,brown!75!black,lightgray},
  Correction,Unit=0.35]%
{PAyoda.csv}
```

Code  $\LaTeX$

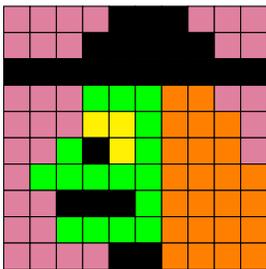

```

%version with normal data
\begin{filecontents*}{PAсорциере.csv}
V,V,V,V,N,N,N,V,V,V
V,V,V,N,N,N,N,N,V,V
N,N,N,N,N,N,N,N,N,N
V,V,V,G,G,O,O,V,V
V,V,V,J,J,G,O,O,V
V,V,G,N,J,G,O,O,V
V,G,G,G,G,O,O,O,O
V,V,N,N,N,G,O,O,O,O
V,V,G,G,G,G,O,O,O,O
V,V,V,V,N,N,O,O,O,O
\end{filecontents*}

\PixelArtTikz[
  Codes=VNGOJ,
  Colors={purple!50,black,green,orange,yellow},
  Correction,Unit=0.35]%
{PAсорциере.csv}

```

## 7.2 Keys and options

The first argument, *optional* and between [...] offers Keys necessary for the command to function properly:

- the key **⟨Width⟩** which defines the width (radius in cm) of the rendering; default 6
- the key **⟨Center⟩** which defines the width (radius in cm) of the *middle*; default 1.25
- the key **⟨Codes⟩** contains the *string* of the *simple* codes of the file *csv*;
- the key **⟨Colors⟩** which contains the *list* of associated colors;
- the key **⟨Symbols⟩** which contains the *possible list* of alternative characters to display in the boxes;
- the key **⟨Style⟩** which allows you to specify the style of characters. default normalsize
- the Boolean key **⟨Correction⟩** which allows you to color the PixelArt; default false
- the Boolean key **⟨Symb⟩** which allows you to display the *alternative* characters; default false
- the Boolean key **⟨Solution⟩** which displays the solution (with *mirror* effect); default false
- the Boolean key **⟨Swap⟩** which allows you to specify the data type (**⟨true⟩** := normal; **⟨false⟩** := inverted). default false

The second argument, *mandatory*, is the name of the *csv* file to use.

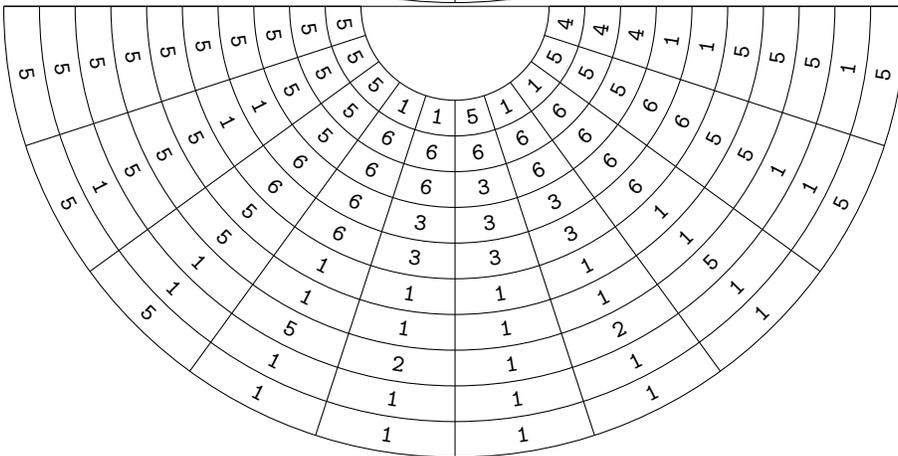

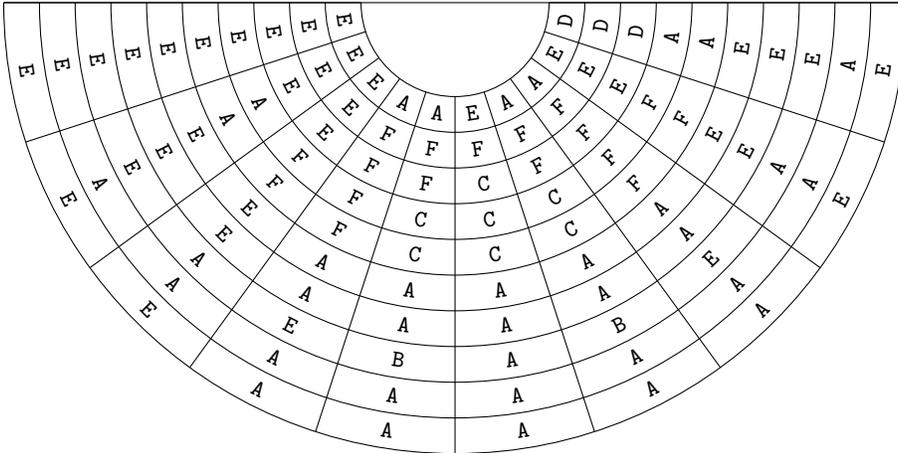

### 7.3 Example with inverted data (Yoda)

In this paragraph, we use the data PAYoda, which corresponds to the *inverted* layout, so the key **(Swap)** is not necessary.

Code  $\LaTeX$

```
%classic version
\PixelArtTikzCylindric[Codes=ABCDEF,Style=\small\ttfamily]{PAYoda.csv}

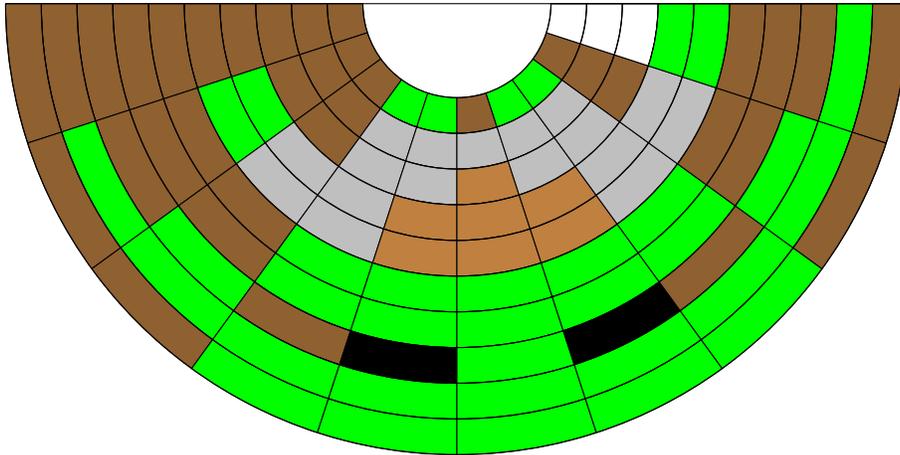

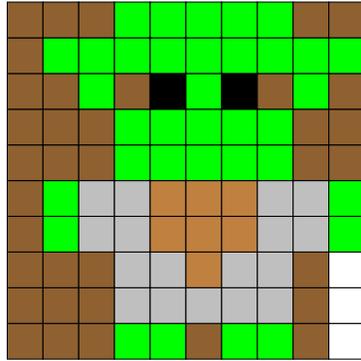

%version with 'symbols'
\PixelArtTikzCylindric[Codes=ABCDEF,Symbols={1,2,3,4,5,6},Symb,Style=\small\ttfamily]{PAYoda.csv}
```

```

%Fix and solution
\begin{tabular}{c}
  \PixelArtTikzCylindric[%
    Codes=ABCDEF,
    Colors={green,black,brown,white,brown!75!black,lightgray},
    Solution]%
    {PAYoda.csv}
  \\
  \PixelArtTikzCylindric[%
    Codes=ABCDEF,
    Colors={green,black,brown,white,brown!75!black,lightgray},
    Correction]%
    {PAYoda.csv}
\end{tabular}

```

## 8 With datatool

### 8.1 Macros

Code  $\LaTeX$

```
%reading of csv
\readdtcsv{file.csv}{readname}

%full pixelart (french keys for the moment...)
\dtpixlarttikz[keys]{readname}

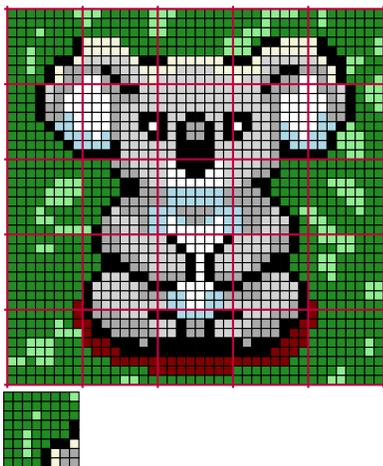

%cut pixelart (french keys for the moment...)
\dtpixlarttikzblock[clés]{readname}{LxC or L+C}{numblock}
```

Code  $\LaTeX$

```
%reading of csv (koala)
\readdtcsv{PAkoala.csv}{DTkoala}

%full pixelart
\dtpixlarttikz[Correction,Unite=0.125,Codes=ABCDEFGH,I,Couleurs={\listcoulkoala},Decoupage=8x8]{DTkoala}

%cut pixelart (french keys for the moment...)
\dtpixlarttikzblock[Unite=0.125,Correction,Codes=ABCDEFGH,I,Couleurs={\listcoulkoala}]%
{DTkoala}{8x8}{1/1}
```

## Part III

# History

v0.1.8 : Bugfix  
v0.1.7 : Bugfix with 'cut'  
v0.1.6 : Styles for lines + **datatool** for alternative version  
v0.1.5 : Symbols can be given with list(s) + Enhancements of internal code  
v0.1.4 : Anamorphic cylinder PixelArts  
v0.1.3 : Cut PixelArts within several PixelArts  
v0.1.2 : *mini*-PixelArts  
v0.1.1 : Bugfix with color  
v0.1.0 : Initial version
